Sep 2021- Apr 2026

Sep 2024 - Dec 2024

SKILLS

Languages: Python, JavaScript, TypeScript, Dart, C++, SQL, HTML, CSS

Technologies: Pandas, Numpy, Pytorch, OpenCV, Tensorflow, BigQuery, Google Cloud Platform (GCP), React, Vue, Django, Go, Amazon Web Services (AWS), Dagster, Flutter, Node.js, Express.js, MySQL, PostgreSQL, Matplotlib, Bash, Git, Github Actions

EXPERIENCE

Statsig (acquired by OpenAI)

Software Engineer

Bellevue, WA

May - August 2025

- Developed a unit testing framework for core BigQuery data pipelines, reducing test creation time by **2 hrs/pipeline**
- Increased test coverage across our core data pipelines from **0% to 75%**, ensuring reliable delivery of **2+ PB of data** per day to customers
- Built a **TypeScript** program that monitors SLA metrics such as latency and reliability with **Datadog and Dagster**, sending Slack alerts when thresholds are breached, which reduced incident response time by roughly **30%**

Nippon Telegraph and Telephone (NTT)

Software Engineer

Toronto, ON

Jan - Apr 2025

- Decreased the inference time of CNN models by **72%**, enabling real-time video object detection
- Statistically analyzed concurrency and batch configurations in NVIDIA Triton, increasing **throughput by 30%** while **decreasing latency by 38%**
- Fine-tuned a Yolov8 model to detect personal protective equipment on construction sites with **92% accuracy**

Uncaught Exceptions

Software Engineer

Toronto, ON

Jan - Apr 2024

- Spearheaded automation of image mask creation using **OpenCV**, reducing manual efforts by **1,200+ hours** for training segmentation models
- Fine-tuned a MobileViT model for image segmentation using **PyTorch**, which raised segmentation accuracy to **96%**
- Trained an EfficientNet classification model, achieving **80%+ accuracy** in identifying various rock types
- Developed a Flutter app that allows users to identify **50+ rocks** through an intuitive front-end interface

GaN Systems

Software Developer

Ottawa, ON

Jun-Sep 2023

- Reduced production time from **3 hrs to 5 mins** by deploying a part selection script increasing operational efficiency
- Saved **8 minutes** per production batch by creating a data visualization tool to detect semiconductor defects
- Decreased preparation time from **2 hrs to 4 mins** by creating a program to visualize yield and failure trends, streamlining production planning and allowing for improved production quality

Daily Blends

Full-stack Developer

Toronto, ON

Sep-Dec 2022

- Enabled inventory tracking across 7 locations by implementing a **PostgreSQL** backend system utilizing **AWS**
- Developed RESTful APIs using **Node.js** and **Express.js** to collect sales data on the administration dashboard
- Enhanced consumer purchasing experience across **50+ new locations** through the development of a Flutter app

PROJECTS

[SSVEP Keyboard || Watolink](#)

Python, GPT-3

- Built a [BCI controlled keyboard](#) using Python for individuals with speech impairments
- Integrated GPT-3 API to give word and phrase suggestions to increase typing speed by 75%
- Placed 1st in the NeurotechX Student Competition, outperforming 25 other universities

Interests: Ultimate Frisbee, Hockey, Marathon Running, BCIs, Traveling
